Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	20 October 2026
Team ID	En25cs3010891
Project Name	Health360: Comprehensive Healthcare Risk & Disease Analytics
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)	Priority (High/Medium/Low)
1	Data Access & Integration	[Specify what business data the solution should access or integrate to address the use case.]	High
2	Data Processing	[Specify what data preparation, transformation, or processing is required for the use case.]	High
3	Business Analysis	[What business calculations, KPIs, metrics, aggregations, or analysis are required to answer the use-case questions. .]	High
4	Business Insights & Analytical Outputs	[What insights, analytical outputs, dashboards, visualizations, reports, or result sets the solution should provide. .]	High
5	User Interaction & Analysis	[Specify how users should filter, compare, drill down, or explore information relevant to the use case.]	Medium
6	Data Update & Reporting	*[Specify how the solution should provide updated information and generate the required business outputs for the use case.]*	Medium

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	**Usability**	The Tableau dashboard must provide a clean, intuitive layout with self-explanatory tooltips and interactive filters for non-technical users.
NFR-2	**Security**	Patient data records must adhere to privacy standards, anonymizing sensitive attributes to maintain data confidentiality.
NFR-3	**Reliability**	The data processing pipeline and visualization models must produce consistent, reproducible statistical aggregations without data corruption.

NFR-4	**Performance**	Dashboard queries, data filters, and visual renderings must load in under 2 seconds for datasets up to 10,000 records.
NFR-5	**Availability**	The web-hosted analytics dashboard (Tableau Public / Streamlit) must maintain 99.9% uptime for continuous stakeholder access.
NFR-6	**Scalability**	The architecture must easily scale to accommodate larger hospital record repositories and multi-departmental health datasets.
